

Concrete	Weatherboards & Walls
Tile Roofs	Decks
Terracotta Roofs	Wooden & Painted Surfaces
Translucent Roofs	Fibro Cement
Skylights	Ceramic Floor & Wall Tiles
Bricks and Blockwork	Asbestos & Supa 6 Roofs
Concrete	(Warning - do not waterblast asbestos roof surfaces)
Cobblestones & Pavers	
Paths & Driveways	

Orgo'Clean™ is a pure organic non-toxic contact cleaning solution for the removal of moss, moulds and lichens on most surface areas.

Extracted from a totally renewable plant source grown in New Zealand, Orgo'Clean™ has been developed as the alternative to toxic chemicals and solutions which are currently in use.

Orgo'Clean™ is audited and certified by **Agriquality New Zealand**
Certificate No. 144

Utilising essential pine extracts as the active ingredient, **Orgo'Clean™** contains no other toxic substances, chlorides or quat compounds.

Being 100% water soluble the product is also bio-degradable, and is released into the atmosphere as naturally occurring oxides of carbon and nitrogen.

After application, moss and lichens will deteriorate and loosen, and depending on natural weathering processes, lift from surfaces over a period of time.

After 48 hours the moss and lichen removal process can be accelerated by waterblasting.

Eliminate regrowth by maintaining surfaces with an application of Orgo'Clean™ every 2 to 3 years.

Application and Equipment: Orgo'Clean™ should be applied with pump driven or hand held equipment which can provide sufficient spray volume for thorough coverage and wetting.

Common application methods are:

1. Motorised pump units
2. Air assisted or airless spray units
3. Backpack spray units
4. Garden hand-held spray units
5. Handheld watering cans

Theoretical Coverage Rate

Orgo'Clean™ can be simply applied to all affected areas. Complete wetting and coverage of total surface areas can be achieved using one litre **Orgo'Clean**™ per 5 square metres.

The tendency of the solution to foam can be enhanced by delivering the **Orgo'Clean**™ solution through a special patented air-aspirated foam nozzle at greater than 30 psi. These can be purchased from Flexco (NZ) Ltd.

The advantages are:

- Better evidence of coverage
- Reduction in overspray, drift and runoff.
- Slower evaporation time, therefore increased activity time.

Ask your local distributor:

CAUTION:

Treated surfaces may become temporarily slippery restrict traffic until dry.

Restrict foot traffic until dry.

Avoid discharging into streams and other aquatic habitats.

Avoid direct contact with grass plants.

DOES NOT CONTAIN TOXIC SUBSTANCES, CHLORINE OR QUAT COMPOUNDS.
